# Monochrome Printer Drivers

Black & White when  
You Want It  
Color when  
You Need It

## Color Enhances Your Image

Color documents grab your readers' attention and enhance your image. But while KONICA MINOLTA laser printers and all-in-ones provide the best color print quality for the money, you may find that not every memo and spreadsheet or every employee in your office needs color printing.

## Monochrome Printer Drivers

If you want to print a document in black and white only once in a while, simply select "B/W" in the color printer driver properties for that print job.

However, at times you may want to limit one or more users (for example, those in an accounting function) to black and white printing only. For this reason, KONICA MINOLTA has developed "monochrome only" printer drivers for many of our color laser printers.

These drivers look and function exactly the same as the color printer drivers, but all documents print in black and shades of gray rather than in full color. This prevents your color resources from being depleted on nonessential print jobs and helps you maintain the lowest printing costs while ensuring that those employees and functions that require the power of color have it when they need it.

## Availability

Monochrome printer drivers for the following KONICA MINOLTA printers can be downloaded from [printer.konicaminolta.com/support](http://printer.konicaminolta.com/support):

- magicolor 2400W
- magicolor 2430 DL
- magicolor 2450 (PostScript driver\* and PPD for Microsoft driver)
- magicolor 5430 DL/5440 DL
- magicolor 5450 (PostScript driver\* and PPD for Microsoft driver)

\* Color and monochrome PostScript printer drivers may both be installed on the same system at the same time. Color and monochrome non-PostScript drivers may not.
